At anytime we can be inspected by the EPA, there is an annual requirement to be in compliance with the EPA standards. Part of the EPA requirements is that the Township inspect the water ways and streams that enter and discharge in the Township. The outflow is checked once a year and documented to meet the requirements of the EPA. The Village of Crete does our locations in conjunction while inspecting theirs. We have 7 locations within Crete Township.

1. A spill kit is located near the fuel site. If there is a gasoline or diesel spill there are items located in the spill kit to contain a small spill, if there is a large spill the Fire District shall be called by dialing 911.
2. When hauling branches or other debris with a Township vehicle the load shall be secure. Cover if necessary.
3. While driving around along the Township Roads be mindful to look for blockages around bridges and culvert that are blocking the water flow, also look for an oily sheen on top of the water or a strange smell. Report any findings to the Highway Commissioner
4. During the months when salt is not being used the concrete barriers or a Tarp/tire system shall be placed in front of the salt shed door opening to prevent any salt run-off. During the winter season when salt is being used a plastic cover shall be placed over the manhole inlet that is located just east of the salt shed.
